Table of contents

Chapter 1	General introduction	p. 7
Chapter 2	The Prc and RseP proteases control bacterial Cell-Surface Signalling activity	p. 23
Chapter 3	Processing of Cell-Surface Signalling anti-sigma factors prior to signal recognition is a conserved autoproteolytic mechanism that produces two functional domains	p. 49
Chapter 4	Self-cleavage of the <i>Pseudomonas aeruginosa</i> Cell-Surface Signalling anti-sigma factor FoxR occurs through an N-O acyl rearrangement	p. 77
Chapter 5	Regulation of Cell-Surface Signalling activity: lessons from a mutation analysis of the <i>Pseudomonas putida</i> IutY sigma/anti-sigma factor hybrid protein	p. 95
Chapter 6	Expression of the <i>Pseudomonas aeruginosa</i> PUMA3 Cell-Surface Signalling system occurs in response to phosphate starvation and full activation depends on the Prc and RseP proteases	p. 127
Chapter 7	Summarizing discussion	p. 147
Addenda	References	p. 162
	Summary/Samenvatting/Resumen	p. 172
	Dankwoord	p. 180
	Curriculum vitae	p. 182
	List of publications	p. 184
